Services and
Software

OVERVIEW

A better world through better environmental management

ENVIROCHEM provides innovative environmental management, engineering and software services.

Combining our powerful environmental management computer systems with our expertise in environmental services provides our clients efficient, cost effective environmental management solutions. This combination has been successfully applied at a wide variety of operations including; single site industries, governments, and multi-site installations at Fortune 500 companies.

Integration of software with a deep environmental knowledge base, streamlines environmental management. This allows industry, governments and institutions to focus on their core business, while ENVIROCHEM provides the solutions and support necessary to effectively manage the environmental data tracking and reporting issues.

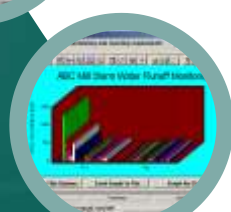

ENVIROCHEM's hands on environmental expertise, and innovative approaches delivers award winning environmental management, custom environmental engineering and software solutions on time and on budget. A winning combination that has fueled our dynamic growth over the last 15 years.

ENVIROCHEM's solutions are designed to work cooperatively and seamlessly from the shop floor to the boardroom. Our goal is to be an efficient and functional member of your team, with ENVIROCHEM managing your environment, so you can manage your business.

Specifically, ENVIROCHEM developed a suite of software tools incorporating over 60 years of environmental and IT experience. Our signature award winning software application, **eDICTS™** [Environmental Data, Information, Control and Tracking System], is the ideal tool for corporations, advisors, consultants, trainers and auditors. **eDICTS™** is user friendly, ISO 14001 compliant solution that provides a complete system for recording, monitoring and reporting environmental performance. **eDICTS™** reduces the amount of time management and staff spend on environmental administration, while allowing management to demonstrate due diligence and responsible environmental stewardship.

eDICTS™ has been designed by experienced Environmental Managers, built by IT professionals and used by Environmental Managers.

If you require excellence in Environmental Management, you require ENVIROCHEM's services, software, and solutions. Simply the Best Environmental Services and Software Integration Available.

Environmental Software Applications

In addition to our environmental services, **ENVIROCHEM** has developed a suite of both custom and proven software solutions.

These products include:

eDICTS™

- A comprehensive EMS Software Solution. Each application can be customized to specific client needs

ePAS™

- A comprehensive permit administration system primarily focused on government agencies and corporations with many sites &/or permits;

eMON™

- A comprehensive environmental data manager focused on water quality monitoring issues;

eSAM™

- A complete easy to use self audit module that generates comprehensive environmental, health and safety, compliance and due diligence audits including corrective and preventative action tracking

eDICTS™ PAPER

- An expanded version of **eDICTS™** designed to meet the environmental management demands of the Pulp & Paper industry

**Integrated Environmental &
Software Solutions**

The combination of environmental management and software expertise sets the Envirochem product line apart. Clients consistently remark on the practical, cost-effective and user-friendly features that are embodied in **eDICTS™**. Furthermore, we back our installations from start to finish, including system installation, implementation strategy and user training.
